

# Alternative Approach to Forestry workshop

## Hopefield - 26th November

**An on-farm workshop on alternative approaches to forestry including mixed eucalypts and totara as a permanent carbon forest, integrated into farming.**

**Hopefield Farm**  
10am -3pm  
Followed by food and drink  
Bring your lunch

**RSVPs are essential**

**info@postquakefarming.co.nz**  
call **Bridget 021 412 411**

Numbers are strictly limited.

The areas we will be looking at have difficult access, so we need side-by-sides and two-wheelers to access the site.

When you RSVP please let us know what transport you have. We'll send you the final details before the day.

The workshop will be in two parts:

1. A visit to a site where a variety of tree planting have been undertaken, including Cypress/Timber and permanent carbon forest with **eucalypts used as a nurse crop for native totara** as canopy trees. We will look at various options for forestry and hold a focused discussion with Patrick Milne, who assisted with establishment.
2. An update on the **biodiversity workstream**, including work to understand the potential of the native forestry resource (all trial site participants have been invited), and presentation of the first attempt at a biodiversity management plan.

Michael Bennett: PQF Project Manager  
Patrick Milne - Forester  
Adam Forbes - Forest Ecologist  
Thanks to Martin Satterthwaite for hosting.
